## ESF Shape and Space

<table>
<thead>
<tr>
<th>IBO Overall Expectation</th>
<th>IBO Conceptual Understanding</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>K1</strong></td>
<td>Shapes can be described and organized according to their properties.</td>
</tr>
<tr>
<td><strong>K2</strong></td>
<td>Objects in our immediate environment have a position in space that can be described according to a point of reference.</td>
</tr>
<tr>
<td><strong>Year 1</strong></td>
<td>Shapes are classified and named according to their properties.</td>
</tr>
<tr>
<td><strong>Year 2</strong></td>
<td>Some shapes are made up of parts that repeat in some way.</td>
</tr>
<tr>
<td><strong>Year 3</strong></td>
<td>Specific vocabulary can be used to describe an object’s position in space.</td>
</tr>
<tr>
<td><strong>Year 4</strong></td>
<td>Changing the position of a shape does not alter its properties.</td>
</tr>
<tr>
<td><strong>Year 5</strong></td>
<td>Shapes can be transformed in different ways.</td>
</tr>
<tr>
<td><strong>Year 6</strong></td>
<td>Geometric shapes and vocabulary are useful for representing and describing objects and events in real-world situations.</td>
</tr>
<tr>
<td><strong>Phase 1</strong></td>
<td>Learners will understand that shapes have characteristics that can be described and compared. They will understand and use common language to describe paths, regions and boundaries of their immediate environment.</td>
</tr>
<tr>
<td><strong>Phase 2</strong></td>
<td>Learners will continue to work with 2D and 3D shapes, developing the understanding that shapes are classified and named according to their properties. They will understand that examples of symmetry and transformations can be found in their immediate environment. Learners will interpret, create and use simple directions and specific vocabulary to describe paths, regions, positions and boundaries of their immediate environment.</td>
</tr>
<tr>
<td><strong>Phase 3</strong></td>
<td>Learners will sort, describe and model regular and irregular polygons, developing an understanding of their properties. They will be able to describe and model congruency and similarity in 2D shapes. Learners will continue to develop their understanding of symmetry, in particular reflective and rotational symmetry. They will understand how geometric shapes and associated vocabulary are useful for representing and describing objects and events in real-world situations.</td>
</tr>
<tr>
<td><strong>Phase 4</strong></td>
<td>Learners will understand the properties of regular and irregular polyhedra. They will understand the properties of 2D shapes and understand that 2D representations of 3D objects can be used to visualize and solve problems in the real world, for example, through the use of drawing and modelling. Learners will develop their understanding of the use of scale (ratio) to enlarge and reduce shapes. They will apply the language and notation of bearing to describe direction and position.</td>
</tr>
</tbody>
</table>

### Manipulation of Shape and Space

- **Phase 1**: Manipulation of shape and space takes place for a particular purpose.
- **Phase 2**: Consolidating what we know of geometric concepts allows us to make sense of and interact with our world.
- **Phase 3**: Geometric tools and methods can be used to solve problems.

</tbody>
</table>

- **Location**: Develop an understanding and begin to use simple vocabulary to describe position, for example, in, out, on, under, up, down. Can follow and give simple directions, describing paths, regions, positions and boundaries of their immediate environment.

- **Phase 1**: Develop an understanding and begin to use simple vocabulary to describe position, direction and movement, for example, inside, outside, above, below, next to, behind, in front of, up, down.

- **Phase 2**: Describe position and direction in a practical context for example, inside, outside, above, below, next to, behind, in front of, up, down.

- **Phase 3**: Describe position and direction using mathematical vocabulary for example, left, right, forwards, backwards.

- **Phase 4**: Describe direction and position using mathematical language for example describing rotations: whole turn; half turn; quarter turn; clockwise and anti-clockwise.

- **Phase 5**: Describe direction using the four compass points.

- **Phase 6**: Describe direction using the eight compass points.

- **Location**: Describe position using the language and notation of bearing.

- **Phase 1**: Describe position and direction in a practical context for example, inside, outside, above, below, next to, behind, in front of, up, down.

- **Phase 2**: Describe position and direction using mathematical vocabulary for example, left, right, forwards, backwards.

- **Phase 3**: Describe direction and position using mathematical language for example describing rotations: whole turn; half turn; quarter turn; clockwise and anti-clockwise.

- **Phase 4**: Describe direction using the four compass points.

- **Phase 5**: Describe direction using the eight compass points.

- **Phase 6**: Describe position using the language and notation of bearing.
